NovaTech Systems — Company Handbook

NovaTech Systems • Internal Knowledge Base Document

Field	Value
Document ID	NT-HR-001
Version	1.3
Effective date	2026-07-01
Owner department	Human Resources
Last updated	2026-09-15
Status	Active

Purpose and scope

Defines the company context, mission, values, organizational structure, communication norms, and general employee responsibilities.

All names, systems, processes, dates, limits, and examples in this document are fictional and exist only for the NovaTech Systems RAG knowledge-base exercise.

1. Company Overview

NovaTech Systems is a fictional mid-sized B2B SaaS and cloud software company founded in 2018. The company has approximately 850 employees and is headquartered in Bengaluru, India, with offices in Pune, Hyderabad, London, and Singapore. NovaTech builds cloud software intended to simplify complex business operations for enterprise customers.

Mission

“Make complex business operations simple through reliable cloud software.”

Vision

Become a trusted operating layer for modern enterprises by combining dependable workflow, service management, analytics, identity, and AI capabilities.

Values

Value	Expected behavior
Customer first	Prioritize measurable customer outcomes, understand operational context, and avoid shipping changes that create avoidable customer friction.
Build with ownership	Take responsibility for outcomes, not only assigned tasks. Escalate risks early and follow work through verification.
Default to transparency	Share relevant status, assumptions, risks, and decisions with the people who need them.
Learn continuously	Use incidents, reviews, customer feedback, experiments, and technical exploration to improve individual and team capability.
Security is everyone’s responsibility	Protect credentials, customer data, devices, and production systems regardless of role.

2. Products

Product	Purpose	Primary capabilities
NovaFlow	Workflow automation	Triggers, conditions, actions, integrations, workflow execution
NovaDesk	Customer support and service management	Tickets, queues, agents, SLA tracking, escalation, reports
NovaPulse	Analytics and reporting	Dashboards, operational reporting, analytics
NovaID	Identity and access management	Authentication, authorization, roles, permissions, service identity

3. Organizational Structure

Core departments are Engineering, Product, Design, Sales, Marketing, Customer Success, Finance, Human Resources, Information Security, IT Operations, Legal, and Data & AI.

Engineering teams

- Platform Engineering
- Payments
- NovaFlow
- NovaDesk
- NovaPulse
- Identity
- Data Platform
- AI Engineering
- SRE

The standard engineering hierarchy is VP Engineering → Engineering Directors → Engineering Managers → Tech Leads → Software Engineers.

4. Offices and Working Principles

Location	Role in the organization
Bengaluru	Headquarters and primary engineering hub
Pune	Engineering and business operations
Hyderabad	Engineering and customer-facing functions
London	Regional commercial and customer functions
Singapore	Regional commercial and customer functions

- Work is organized around clear ownership, measurable outcomes, and documented decisions.
- Teams should communicate material risks before deadlines are missed.
- Customer, security, privacy, and reliability considerations should be included early in design and delivery.
- Employees should use approved systems for company work and protect confidential information.

5. Communication Channels

Channel	Typical use
Company intranet	Policies, official announcements, and reference documentation

Channel	Typical use
Team chat channels	Day-to-day collaboration, questions, and operational coordination
Email	Formal notices, external communication, and decisions requiring durable records
Issue tracker	Work items, defects, incidents, and delivery status
Incident channel	Real-time coordination during production incidents

6. General Employee Responsibilities

- Follow company policies and applicable security controls.
- Protect company and customer information from unauthorized access or disclosure.
- Maintain accurate records for work that requires durable documentation.
- Raise concerns through the appropriate manager, IT, Security, HR, Legal, or incident process.
- Complete mandatory training within the required timeframe.
- Use company resources primarily for authorized business purposes.
